## **DETAILED ACTION**

### ***Election/Restrictions***

Claims 33-46 are withdrawn from further consideration pursuant to 37 CFR 1.142(b) as being drawn to a nonelected invention, there being no allowable generic or linking claim. Election was made **without** traverse in the reply filed on 6/29/10.

### ***Claim Rejections - 35 USC § 102***

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

Claim 31 is rejected under 35 U.S.C. 102(b/e) as being anticipated by either Lugmair et al, Holzapfel, Hartman, or Davidsen. Lugmair et al (pins), Holzapfel (coneballs), Hartman (coneballs), and Davidsen (pins) each show ball mills with non-spherical media.

### ***Claim Rejections - 35 USC § 103***

Claims 31-32 are rejected under 35 U.S.C. 103(a) as being unpatentable over Tomes et al in view of either Lugmair et al, Holzapfel, Hartman, or Davidsen. Tomes et al discloses the basic process and apparatus for treating biological material in a media mill. The media is spherical shaped which results in inefficient milling. Each of the

secondary references shows a media mill using media of non-spherical shape to crush material. In order to efficiently crush material, it would have been obvious for one of ordinary skill in the art to modify Tones et al by using non-spherical media, taught to be desirable by either Lugmair et al, Holzapfel, Hartman, or Davidsen.

### ***Response to Arguments***

Applicant's arguments with respect to claims 31-32 have been considered but are moot in view of the new ground(s) of rejection.
